

DATA SHEET / MOSAIC FIX TILE ADHESIVE

GENERAL DESCRIPTION

MOSAIC FIX is a pre-mixed precise blend of white cement, shrinkage compensating chemicals, water-proofers and fillers for fixing and grouting mosaics. This product can be applied at varying thicknesses and may be used as a grout.

DIRECTIONS

All surfaces should be sound, clean and free of dust contamination or any weak cement laitance. Do not apply onto painted, metal or gypsum surfaces. Concrete and render surfaces must be allowed to fully cure for 28 days.

Add the powder to clean water and mix to a creamy consistency (± 1.5 liters per 5kg powder). Allow the mix to stand for a few minutes and re-mix before use. Use within 2 hours. Using a notched floor trowel, apply the mix to the relevant surface and firmly bed the mosaics into the adhesive. Mosaics should always be placed into a solid bed of adhesive. Ensure that the mosaics are in full contact with the adhesive. Pre-grout paper-backed sheets with the mix and fix while grout is still wet.

TECHNICAL DETAILS

Coverage	5Kg will cover 1-2m ²
Grouting	24 hours after tiling
Packaging	20Kg and 5Kg bags
